Purpose

I want as a Developer to use my skills and passion for programming to create opportunities and help end users to achieve their goal

Віо

A self-thought programmer that looks for new technology mainly: to work smart and do less and keep things simple. Makes a blog about his code findings and creates tutorials about deployments to speed up the workflow on a new found technology. Experiment JavaScript related and currently focus building a stack app VueJS & NodeJS with combination with Docker. Strongly believe just JavaScript (HTML & (S)CSS/LESS) to build backend and frontend for web is the way forward. Working in groups is no problem at all and as a indivual strong to look for own solutions. Loves working on improving his skill sets.

Also he keeps up to date with Front End related issues by eg reading Smashing Magazine #5 and many blogs.
